

Preventing Brown Tree Snake Invasion on the Receiving End of Pathways to CONUS

S. Wisniewski, S.E. Henke, and B. Pitman

The North America Brown Tree Snake Control Team (NABTSCT) is a collaborative effort between Texas A&M University - Kingsville and the U.S. Fish and Wildlife Service through the Gulf and South Atlantic Regional Panel of the Aquatic Nuisance Species Task Force.

Through these collaborations, the NABTSCT is working to prevent BTS invasion through pathways which include:

- Military shipments (HHG and cargo)
- Commercial shipping and flights
- Pet Trade Industry

The production and distribution of educational materials, website tools, and a risk assessment model are some of the steps that the NABTSCT is taking towards preventing the invasion of this injurious species.

Please visit our website at www.nabtsct.net and refer to your identification card for more information on the habitat and natural history of this species, as well as an interactive snake identification system and other news from the North America Brown Tree Snake Control Team.
